Control System Engineering - Uday A. Bakshi 2020-11-01
The book is written for an undergraduate course on the Feedback Control Systems. It provides comprehensive explanation of theory and practice of control system engineering. It elaborates various aspects of time domain and frequency domain analysis and design of control systems. Each chapter starts with the background of the topic. Then it gives the conceptual knowledge about the topic dividing it in various sections and subsections. Each chapter provides the detailed explanation of the topic, practical examples and variety of solved problems. The explanations are given using very simple and lucid language. All the chapters are arranged in a specific sequence which helps to build the understanding of the subject in a logical fashion. The book starts with explaining the various types of control systems. Then it

explains how to obtain the mathematical models of various types of systems such as electrical, mechanical, thermal and liquid level systems. Then the book includes good coverage of the block diagram and signal flow graph methods of representing the various systems and the reduction methods to obtain simple system from the analysis point of view. The book further illustrates the steady state and transient analysis of control systems. The book covers the fundamental knowledge of controllers used in practice to optimize the performance of the systems. The book emphasizes the detailed analysis of second order systems as these systems are common in practice and higher order systems can be approximated as second order systems. The book teaches the concept of stability and time domain stability analysis using Routh-Hurwitz method and root locus method. It further explains the fundamentals of frequency domain analysis of the systems including co-relation between time domain and frequency domain. The book gives very simple techniques for stability analysis of the systems in the frequency domain, using Bode plot, Polar plot and Nyquist plot methods. It also explores the concepts of compensation and design of the control systems in time domain and frequency domain. The classical approach loses the importance of initial conditions in the systems. Thus, the book provides the detailed explanation of modern approach of analysis which is the state variable analysis of the systems including methods of finding the state transition matrix, solution of state equation and the concepts of controllability and observability. The variety of solved examples is the feature of this book which helps to inculcate the knowledge of the design and analysis of the control systems in the students. The book explains the philosophy of the subject which makes the understanding of the concepts very clear and makes the subject more interesting.

Evaluating IMF Training: What Can We Learn? - Ms.Hali J Edison 2018-06-27
The IMF provides training to its membership in its core areas of expertise mainly through its Institute for Capacity Development (ICD) or formerly the IMF Institute (INS). This paper looks at the methods that ICD used to evaluate this activity and analyzes the data collected over the period 2006–13. Since 2015, ICD has undertaken a review of its curriculum and revamped its courses and evaluations. Hence this paper provides a detailed analysis of the situation prior to the review.The study's novel feature is its attempt to distill information from all evaluation sources in one place. It also conducts analysis to explain the evaluation results using participant demographic information. An important message that emerges from the different surveys is that ICD's training program is well liked. Notable differences in results surface when sorting evaluations results by course type or by geographic location, and whether evaluations were filled out by participants or by their sponsoring managers.

INNOVATIONS AND INNOVATIVE PRACTICES IN START-UP IT COMPANIES IN PUNE - Dr. Varsha Deshpande 2021-11-30
1.1 Overview of research study: The information technology industry has become one of the most significant growth catalysts for the Indian Economy. In addition to fuelling India's economy this industry is also positively influencing the lives of its people through direct and indirect contribution to the various socio-economic parameters such as employment, standard of living, education and diversity among others .Growing at an extremely high pace ,the industry has demonstrated a decade of strong growth-growing 15 times to aggregate revenues of USD 69.4 billion in FY 2009.In addition it is one of the largest employers in the organized sector. It provides direct livelihood to 2.2 million. As far as India is concerned the IT industry had humble beginnings with a few Indian entrepreneurs setting up IT services companies and select MNCs such as GE, Texas Instruments and American Express setting up their captive centres in India. Cost arbitrage through abundant talent pool available in India was the key driver for off shoring to India. The perceived success of the first few captives led other MNCs to consider entering India to set up their back office and product development centres. India based third party players started offering similar services to capitalize on the opportunity. The Y2K phenomenon and the dot-com bust gave a strong push to outsourcing of technology services to India, especially after Indian companies were able to prove their capability in delivering the desired quality and functionality at a significantly lower cost. Over a period of time this industry has attracted the attention of PE investors leading to a large number of Indian entrepreneurs setting up IT –BPO centers. While cost considerations used to be the primary driver earlier, other factors like performance, quality, productivity have emerged as key reasons for outsourcing work to India.

History of Maintenance of Indian Air Force 1977-2016 - A Krupakaran, P Khandekar 2022-08-13 IAF from its humble beginning in 1932 has transformed itself into fourth largest AF operating at frontiers of technologies with multi-dimensional capabilities and a potent force to reckon with. It is said that the history is written by winners. But what is important is that the history is documented impartially, objectively and factually, as much as possible. It may be worth for IAF to consider coming out with a book each on Operations, Maintenance and Administration, depicting the historical decisions taken - successes and failures in equal measure - and how the IAF progressed over the decades to be what it is today - a professionally managed, optimally exploited, synergistically working and one of the most effective instruments of national power to ensure accomplishing objectives of the nation. Yes, coffee table books and anniversary issues do gloss over a few events, but the real history is made by the toil, blood and sweat and tears of the men behind these operations. Individual awards and citations many times compromise on actualities and are miserly with truth. "History is an argument without an end" said Pieter Geyl the Dutch historian. "I am glad to recommend this book to all, as the readers of the book, irrespective of their background, will enjoy the journey of these 'spanners and

screwdrivers' of 12 AEC covering almost 900 man-years of IAF maintenance. It is also bound to raise curiosity in many minds to know more about air force maintenance. The book may act as a lighthouse for a lot of the present serving aeronautical engineers in their progression." – Air Marshal KS Bhatia, PVSM AVSM & BAR "40 years of IAF maintenance history told through the voices of 39 outstanding air force officers with an unsurpassed breadth of experience and accomplishments. Most inspiring." – Ramesh Dontha, Author of The 60-Minute Startup series of books, 3 times bestselling author, Gold Medal Award winner in 2020 Reader's Favorite International Competition (Marketing)

Astrophysics At Ultra-high Energies - Proceedings Of The 15th Course Of The International School Of Cosmic Ray Astrophysics - Maurice M Shapiro 2007-11-22
This book introduces young researchers to the exciting field of ultra-high energy astrophysics including charged particles, gamma rays and neutrinos. At ultra-high energy the radiation is produced by interactions of cosmic ray particles accelerated in explosive events such as supernovae or hypernovae, black holes or, possibly, the big bang. Through direct contact with senior scientists, now actively planning the next generation of experiments/models, the excitement and motivation for research at ultra-high energy was conveyed. The underpinning of these fields is a synthesis of knowledge and techniques from nuclear and particle physics, astronomy and cosmology. Informing the participants of this background, how it was derived, and the new challenges for the future are the major goal. Further, the course has helped to foster new astrophysical research and promoted contacts, which have resulted in new collaborations.
