[Jet Cutting Technology](#) - A. Lichtarowicz 2012-12-06

This volume contains papers presented at the 11th International Conference on Jet Cutting Technology, held at St. Andrews, Scotland, on 8-10 September 1992. Jetting techniques have been successfully applied for many years in the field of cleaning and descaling. Today, however, jet cutting is used in operations as diverse as removing cancerous growths from the human body, decommissioning sunsea installations and disabling explosive munitions. The diversity is reflected in the papers presented at the conference. The papers were divided into several main sections: jetting basics -- materials; jetting basics -- fluid mechanics; mining and quarrying; civil engineering; new developments; petrochem; cleaning and surface treatment; and manufacturing. The high quality of papers presented at the conference has further reinforced its position as the premier event in the field. The volume will be of interest to researchers, developers and manufacturers of systems, equipment users and contractors.

A New Direction for China's Defense Industry - Evan S. Medeiros 2005-12-19

Since the early 1980s, a prominent and consistent conclusion drawn from research on China's defense-industrial complex has been that China's defense-production capabilities are rife with weaknesses and limitations. This study argues for an alternative approach: From the vantage point of 2005, it is time to shift the focus of current research to the gradual improvements in and the future potential of China's defense-industrial complex. The study found that China's defense sectors are designing and producing a wide range of increasingly advanced weapons that, in the short term, are relevant to a possible conflict over Taiwan but also to China's long-term military presence in Asia. Part of a larger RAND Project AIR FORCE study on Chinese military modernization, this study examines the current and future capabilities of China's defense industry. The goals of this study are to 1.

Case in Point - Marc Cosentino 2007

Motorized Obsessions - Paul R. Josephson 2007-09-02

2008 Outstanding Academic Title, Choice Magazine From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices

that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

[Riding in the Zone](#) - Ken Condon 2019-10-15

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. *Riding in the Zone* helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. *Riding in the Zone* takes riders to the next level in their skill set.

Brand New Justice - Simon Anholt 2006-08-11

Recently vilified as the prime dynamic driving home the breach between poor and rich nations, here the branding process is rehabilitated as a potential saviour of the economically underprivileged. *Brand New Justice*, now in a revised paperback edition, systematically analyses the success stories of the Top Thirteen nations, demonstrating that their wealth is based on the 'last mile' of the commercial process: buying raw materials and manufacturing cheaply in third world countries, these countries realise their lucrative profits by adding value through finishing, packaging and marketing and then selling the branded product on to the end-user at a hugely inflated price. The use of sophisticated global media techniques alongside a range of creative marketing activities are the lynchpins of this process. Applying his observations on economic history and the development and impact of global marketing, Anholt presents a cogent plan for developing nations to benefit from globalization. So long the helpless victim of capitalist trading systems, he shows that they can cross the divide and graduate from supplier nation to producer nation. Branding native produce on a global scale, making a commercial virtue out of perceived authenticity and otherness and fully capitalising on the 'last mile' benefits are key to this graduation and fundamental to forging a new global economic balance. Anholt argues with a forceful logic, but also backs his hypothesis with enticing glimpses

of this process actually beginning to take place. Examining activities in India, Thailand, Russia and Africa among others, he shows the risks, challenges and pressures inherent in 'turning the tide', but above all he demonstrates the very real possibility of enlightened capitalism working as a force for good in global terms. *Modern Meteor Science* - Robert Hawkes 2006-08-18

A Cultural History of the Disneyland Theme Parks - Sabrina Mittermeier 2020-11-10

When the first Disneyland opened its doors in 1955, it reinvented the American amusement park and transformed the travel, tourism and entertainment industries forever. Now a global vacation empire, the original park in Anaheim, California, has been joined by massive complexes in Florida, Tokyo, Paris, Hong Kong and Shanghai. Spanning six decades, three continents and five distinct cultures, Sabrina Mittermeier presents an interdisciplinary examination of the parks, situating them in their proper historical context and exploring the distinct cultural, social and economic landscapes that defined each one at the time of its construction. She then spotlights the central role of class in the subsequent success or failure of each venture. The first comparative study of the Disney theme parks, this book closes a significant gap in existing research and is an important new contribution to the field, providing the first discussion of the Disney parks and what they reveal about the cultures they are set in. There has been a lack of focus on cross- and trans-cultural analyses of theme parks generally and Disney theme parks specifically, until now. It is also particularly interesting - and will be welcomed for it - for the non-United States context of the study. This is a thorough examination of all of the existing Disney Parks and how they function within their respective cultures. While Disney themes and characters attempt to be universal, the author does a good job of arguing for where this is not possible and how glocalization is crucial to the parks' successes. The writing is academic, but it is not inaccessible. It will have wide disciplinary appeal within academia, as tourism studies cross into a variety of fields including history, American studies, fandom studies, performance studies and cultural studies. It will be invaluable to those working in the field of theme park scholarship and the study of Disney theme parks, theme parks in general and related areas like world's expositions and spaces of the consumer and lifestyle worlds. It will also be of interest to Disney fans, those who have visited any of the parks or are interested to know more about the parks and their cultural situation and context. Dr. Sabrina Mittermeier and Dr. Tracey Mollett discuss the cultural histories of Disney's theme parks and fairy tales:

Snow Crash - Neal Stephenson 2003-08-26

Neal Stephenson, a modern classic that predicted the metaverse and inspired generations of Silicon Valley innovators Hiro lives in a Los Angeles where franchises line the freeway as far as the eye can see. Hiro delivers pizza to the mansions for a living, defending his pies from marauders when necessary with a matched set of samurai swords. His home is a shared 20 X 30 U-Stor-It. He spends most of his time goggled in to the Metaverse, where his avatar is legendary. But in the club known as The Black Sun, his fellow hackers are being felled by a weird new drug called Snow Crash that reduces them to nothing more than a jittering cloud of bad digital karma (and IRL, a vegetative state). Investigating the Infocalypse leads Hiro all the way back to the beginning of language itself, with roots in an ancient Sumerian priesthood. He'll be joined by Y.T., a fearless teenaged skateboard courier. Together, they must race to stop a shadowy virtual villain hell-bent on world domination.

The Wolf of Wall Street - Jordan Belfort 2007-09-25

NEW YORK TIMES BESTSELLER • Now a major motion picture directed by Martin Scorsese and starring Leonardo DiCaprio By day he made thousands of dollars a minute. By night he spent it as fast as he could. From the binge that sank a 170-foot motor yacht and ran up a \$700,000 hotel tab, to the wife and kids waiting at home and the fast-talking, hard-partying young stockbrokers who called him king, here, in Jordan Belfort's own words, is the story of the ill-fated genius they called the Wolf of Wall Street. In the 1990s, Belfort became one of the most infamous kingpins in American finance: a brilliant, conniving stock-chopper who led his merry mob on a wild ride out of Wall Street and into a massive office on Long Island. It's an extraordinary story of greed, power, and excess that no one could invent: the tale of an ordinary guy who went from hustling Italian ices to making hundreds of millions—until it all came crashing down. Praise for *The Wolf of Wall Street* "Raw and frequently hilarious."—The New York Times "A rollicking tale of [Jordan Belfort's] rise to riches as head of the infamous boiler room Stratton Oakmont . . . proof that there are indeed second acts in American lives."—Forbes "A cross between Tom Wolfe's *The Bonfire of the Vanities* and Scorsese's *GoodFellas* . . . Belfort has the Midas touch."—The Sunday Times (London) "Entertaining as

pulp fiction, real as a federal indictment . . . a hell of a read."—Kirkus Reviews

University Physics - Samuel J. Ling 2017-12-19

University Physics is designed for the two- or three-semester calculus-based physics course. The text has been developed to meet the scope and sequence of most university physics courses and provides a foundation for a career in mathematics, science, or engineering. The book provides an important opportunity for students to learn the core concepts of physics and understand how those concepts apply to their lives and to the world around them. Due to the comprehensive nature of the material, we are offering the book in three volumes for flexibility and efficiency. Coverage and Scope Our University Physics textbook adheres to the scope and sequence of most two- and three-semester physics courses nationwide. We have worked to make physics interesting and accessible to students while maintaining the mathematical rigor inherent in the subject. With this objective in mind, the content of this textbook has been developed and arranged to provide a logical progression from fundamental to more advanced concepts, building upon what students have already learned and emphasizing connections between topics and between theory and applications. The goal of each section is to enable students not just to recognize concepts, but to work with them in ways that will be useful in later courses and future careers. The organization and pedagogical features were developed and vetted with feedback from science educators dedicated to the project.
