Medtech - Pierre-Yves Donzé 2022-01-01

This book offers an analysis of the dynamics of the global medical device (medtech) industry from the 1960s until the present, using the approaches of business history and industry studies. While most of the publications in the corresponding field have focused on particular countries/regions or actors, this research is unique in its scope. First, it explores the formation and development of medtech business both globally and in the major countries engaged in this industry (the United States, Japan, Germany, Switzerland, France, and China). Second, it tackles a broad range of actors and organizations, from individual entrepreneurs, medical doctors, and engineers to small family firms, start-ups, and large multinationals, as well as universities and research centers. Hence, for the first time, this book both provides a general understanding of the formation and transformation of the medtech industry throughout the world and sheds light on the main features of a fast-growing business in the

twenty-first century. This book will be of value to historians, industry professionals, and analysts.

Business sustainability has advanced from greenwashing and branding to being a business imperative. Stakeholders, including shareholders, demand, regulators require, and companies now need to report their sustainability performance. No longer is this a choice for businesses. A decade ago, fewer than 50 companies released sustainability reports, and now more 8,000 global public companies disclose sustainability performance information on some or all five economic, governance, social, ethical, and environmental (EGSEE) dimensions of sustainability performance, and this trend is expected to continue. Indeed, more than 6,000 European public companies would be required to disclose their environmental, social, governance and diversity information for their 2017 reporting year.
